

## Changes in Leisure Time

Leisure time is influenced by many variables, like hours of work, public holidays, paid leave entitlements and retirement arrangements. These factors vary widely between countries. This study gives an overview of leisure and tourism trends in 18 important tourism-generating countries. It identifies institutional agreements, which shape leisure time in each country. It also looks at factors, which are now influencing how leisure time will develop in the future and how consumer behaviour and tourism are likely to be affected. This publication is a valuable source to all those interested in the major social and economic factors influencing leisure time and tourism and essential to anyone responsible for strategic planning, marketing, and product development.
