

Modern Aspects of Electrochemistry 41

Volume 41 of the prominent series Modern Aspects of Electrochemistry covers a range of topics in Electrochemistry and Electrochemical Engineering. The topics include the second chapter on the survey of experimental techniques and devices of solid state electrochemistry begun by Professor Joachim Maier in Volume 39. Chapter two contains a review of synthesis and characterization of nanoporous carbons and their electrochemical applications. The next chapter reviews and discusses the use of graphs in the study of chemical reaction network. The book also reviews and discusses mathematical models of three dimensional electrode structures.
