

Nanotechnology Commercialization

In terms of commercialization, nanomaterials occupy a unique place in nanotechnology. Engineered nanomaterials, especially nanoparticulate materials, are the leading sector in nanotechnology commercialization. In addition, the nanomaterial sector has attracted much more heated debate than any other nanotechnology sector with regard to safety, regulation, standardization, and ethics. This is the first book on nanotechnology commercialization that deals exclusively with nanomaterials. It provides overviews of the current trends in, and the issues associated with, the commercialization of nanomaterials by some of the foremost nanotechnology experts in their fields.
